JustZIPit License Key [32|64bit]

JustZIPit is a quick and simple compression tool designed to provide an on-the-go solution to all users who wish to extract files and create ZIP archives as fast as possible. While other compression tools assault the users with complex interfaces and lots of features, JustZIPit wishes to remain very simple, offering an innovative approach to this particular task. The application has no actual interface, but instead it places entries in the Windows Context Menu to easily handle archives on the go. Thus, it's enough to right click a file or a folder and create a ZIP archive instantly. The downside is obviously the lack of configuration options, which means you have absolutely no settings at your disposal, so you can't customize compression, security or volume size. In addition, once you right click a ZIP or a CAB archive, the Windows Context Menu displays a new entry called "JustUnzipIt" which lets you extract all files in a dedicated folder placed in the same location. As said, there's no configuration screen available, and not even an interface, so JustZIPit is quite a straightforward product addressed to all those who wish to handle archives on the go. On the good side, it works on all Windows versions and doesn't affect system performance at all, running on low resources most of the time, even when dealing with larger archives. All things considered, JustZIPit is an interesting compression tool that needs some improvements to become a top product in this particular software category. It's fast and reliable, but the lack of configuration options is clearly a major setback.
